

Help - SyncRadio

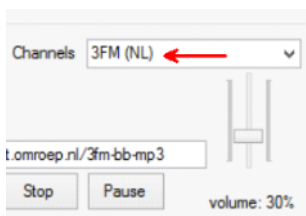

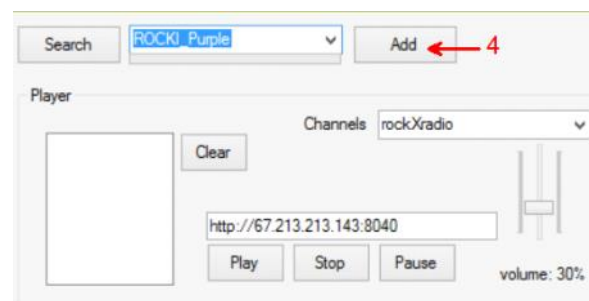

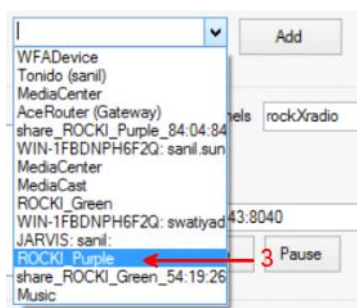

01 January 2015 03:52

Hit search to look for all the UPnP devices in your network

In the dropdown you will see your Rocki devices, along with other devices
Select all Rocki players one by one and click add, they will appear in player pane which means they are in selected players

Now, select channel of your choice or just override the radio channel url in the text box
(make sure the URL is valid and working)

Hit Play, and it will play together on all devices (if you are not unlucky, it will be all in sync)
You can use volume to control volume of all your devices together
